

Joe Anthony-Brown joe.anthonybrown@gmail.com (347) 651-5737 GitHub: [joewab](#) | [website](#)

Full Stack Software Engineer with an emphasis on building efficient, scalable Front-End applications and intuitive user experiences. Interested in game design, data visualization, and machine learning.

Experience

Travelers Insurance — *Software Engineer*

July 2022 - Present

- Built a new React/Typescript UI application from the ground up for managers of insurance auditors to manually reassign, close, and prioritize work items on auditors' work lists, implementing AG Grid and Okta authentication
- Developed reusable, scalable components in Angular/TypeScript for insurance auditing software, enabling customizable admin dashboards and worklists for insurance auditors and managers, boosting product utilization from 15% to 65% with highly positive user feedback
- Integrated secure data retrieval from MSSQL, IBMDB2, and MongoDB via Java services
- Developed and maintained RESTful Java APIs requiring SSO authentication using Okta, ingesting data feeds from upstream systems, implementing RabbitMQ and an internal event driven messaging system
- Configured parameters for Jenkins and Gitlab CI/CD automated deployment pipelines in order to implement Snyk security scanning on all code changes
- Led my team's conversion from Cypress to Playwright for UI testing using a Python script to send code snippets and system prompts to an OpenAI API, which reduced conversion time by 80%
- Created knowledge bases and agents using AWS Bedrock to provide additional context to queries sent to an underlying Anthropic model for an internal AI chat application used to train new auditors.
- Refactored Java methods that retrieve notifications for auditors, eliminating an outdated Java service application, optimizing cloud compute necessity and reducing overall cost
- Monitored error rates and latency drops using Tealeaf and Dynatrace, provided weekly reports for business leaders, and produced a playbook of procedures for handling alerts
- Engaged with product managers to gather requirements, define project scope, and ensure alignment with business objectives utilizing JIRA as an effective Agile workflow tool
- Reviewed merge requests on a daily basis using Github and Gitlab tools to ensure adherence to best practices and coding standards
- Mentored junior developers in the use of automated testing software, familiarity with our code base and company-specific procedures and protocols, and the use of Angular and Typescript

Co-Lab-o-Rate — *Founding Engineer*

August 2024 - Present

- Built a full stack web based interactive drawing game as POC for attracting investors, utilizing React, Typescript, HTML, and CSS to faithfully create components based on the designer's wireframes
- Implemented Row Level Security on Postgres tables in Supabase to ensure policies of least privilege
- Created a highly interactive collaborative drawing game using Websockets

Allyx — *Software Engineer, contract*

May 2022 - July 2022

- Developed MVP for a full-stack web application within a month, which enables users to request phone calls with verified volunteers for safety support
- Utilized React, Express, PostgreSQL, and Cloudinary API

Education/ Certifications

University of Minnesota - Twin Cities — *Computer Science - currently enrolled*

Prime Digital Academy — *Certification in Full Stack Software Engineering*

Hunter College — *Master of Fine Arts (MFA)*

New York University — *Bachelor of Science (BS)*

AWS — *Associate Developer Certification, Practitioner Certification*

Georgia Tech — *Professional Certificate in Data Structures and Algorithms*
